
VULNERABILITY ASSESSMENT & PENETRATION TESTING REPORT

Target	tesla.com
Scan ID	96f87e47-b32b-44...
Date	2026-09-29 10:04:53
Classification	CONFIDENTIAL
Tool	Advanced VAPT Scanner v1.0
Methodology	OWASP Top 10 / PTES / NIST SP 800-115

1. Executive Summary

A comprehensive vulnerability assessment and penetration test was conducted against the target 'tesla.com'. The assessment identified 7 security findings, comprising 0 Critical, 0 High, 3 Medium, and 4 Low severity issues. The overall risk rating for the target is assessed as **Medium**. Immediate remediation of Critical and High severity findings is strongly recommended.

Risk Level	Critical	High	Medium	Low
Count	0	0	3	4

Overall Risk Rating: Medium

2. Scope & Methodology

The assessment was conducted against the target: **tesla.com**. The scope included all web-facing assets, open ports, subdomains, APIs, and the application layer. The methodology followed OWASP Testing Guide v4, PTES (Penetration Testing Execution Standard), and NIST SP 800-115.

Phase	Description	Tools/Techniques
Reconnaissance	Technology detection, crawling, subdomain discovery, dir fuzzing	Custom scanner, HTTP analysis
Enumeration	Port scanning, service enum, OS detection, banner grabbing	Socket scanning, banner analysis
Vulnerability Scanning	XSS, SQLi, IDOR, header analysis, SSL, API discovery, OWASP	Payload injection, header inspection
Analysis	CVSS scoring, severity classification, PoC simulation, remediation	CVSS v3.1 calculator, risk matrix

3. Reconnaissance Findings

3.1 Technology Detection

Component	Detected Value
Server	Unknown
Powered By	
CMS	
Frameworks	None detected
Languages	None detected

3.2 Web Crawl Results

Pages crawled: 1 | Links found: 0 | Forms discovered: 0

3.3 Directory Fuzzing

Total paths checked: 29 | Paths found: 10 | Interesting: 9

Path	URL	Status
admin	http://tesla.com/admin...	403
.env	http://tesla.com/.env...	403
robots.txt	http://tesla.com/robots.txt...	200
sitemap.xml	http://tesla.com/sitemap.xml...	403
server-status	http://tesla.com/server-status...	403
phpinfo.php	http://tesla.com/phpinfo.php...	403
info.php	http://tesla.com/info.php...	403
readme.txt	http://tesla.com/readme.txt...	403
CHANGELOG.txt	http://tesla.com/CHANGELOG.txt...	403

4. Enumeration Findings

4.1 Port Scan Results

Host: **tesla.com** | IP: **2.18.52.207** | Ports scanned: **26** | Open ports: **2**

4.2 Service Enumeration

Port	Service	Risk	Banner
80	HTTP	Low	HTTP/1.0 400 Bad Request Server: Akamai
443	HTTPS	Low	SSL/TLS Service

5. Vulnerability Details

1. Finding [Medium] CVSS: {'version': 'CVSS v3.1', 'score': 4.3, 'vector': 'CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:N/I:L/A:N'}

Description: Missing X-Frame-Options - Clickjacking vulnerability

Evidence: ['X-FRAME-OPTIONS header not present in the response.']

Remediation: Add: X-Frame-Options: DENY or SAMEORIGIN

2. Finding [Medium] CVSS: {'version': 'CVSS v3.1', 'score': 5.0, 'vector': 'CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:N/I:L/A:N'}

Description: Missing Content-Security-Policy header

Evidence: ['CONTENT-SECURITY-POLICY header not present in the response.']

Remediation: Implement a strict CSP policy

3. Finding [Medium] CVSS: {'version': 'CVSS v3.1', 'score': 4.8, 'vector': 'CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:N/I:L/A:N'}

Description: Missing HSTS header - downgrade attack possible

Evidence: ['STRICT-TRANSPORT-SECURITY header not present in the response.']

Remediation: Add: Strict-Transport-Security: max-age=31536000; includeSubDomains

4. Finding [Low] CVSS: {'version': 'CVSS v3.1', 'score': 3.1, 'vector': 'CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:N/I:L/A:N'}

Description: Missing X-Content-Type-Options - MIME sniffing vulnerability

Evidence: ['X-CONTENT-TYPE-OPTIONS header not present in the response.']

Remediation: Add: X-Content-Type-Options: nosniff

5. Finding [Low] CVSS: {'version': 'CVSS v3.1', 'score': 3.1, 'vector': 'CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:N/I:L/A:N'}

Description: Missing X-XSS-Protection header

Evidence: ['X-XSS-PROTECTION header not present in the response.']

Remediation: Add: X-XSS-Protection: 1; mode=block

6. Finding [Low] CVSS: {'version': 'CVSS v3.1', 'score': 2.6, 'vector': 'CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:N/I:L/A:N'}

Description: Missing Referrer-Policy header - information leakage

Evidence: ['REFERRER-POLICY header not present in the response.']

Remediation: Add: Referrer-Policy: strict-origin-when-cross-origin

7. Finding [Low] CVSS: {'version': 'CVSS v3.1', 'score': 2.0, 'vector': ''}

Description: Server header reveals: AkamaiGHost

Evidence: ['Server header exposed value: AkamaiGHost.']

Remediation: Remove or obfuscate the Server header.

6. Risk Ratings

OWASP Category	Status	Severity	CVSS
A01 - Broken Access Control	Checked	High	7.5
A02 - Cryptographic Failures	HTTPS not enforced	High	7.5
A03 - Injection	Checked via payload testing	Critical	9.8
A05 - Security Misconfiguration	Checked	Medium	5.3
A06 - Vulnerable and Outdated Components	Component versions analyzed	Medium	5.5
A08 - Software and Data Integrity Failures	SRI check performed	Medium	4.8
A09 - Security Logging and Monitoring Failures	Manual review recommended	Medium	4.3
A10 - Server-Side Request Forgery (SSRF)	Basic SSRF patterns checked	High	7.2

7. Remediation Recommendations

Finding

Priority: Medium | Add: X-Frame-Options: DENY or SAMEORIGIN

Finding

Priority: Medium | Implement a strict CSP policy

Finding

Priority: Medium | Add: Strict-Transport-Security: max-age=31536000; includeSubDomains

Finding

Priority: Low | Add: X-Content-Type-Options: nosniff

Finding

Priority: Low | Add: X-XSS-Protection: 1; mode=block

Finding

Priority: Low | Add: Referrer-Policy: strict-origin-when-cross-origin

Finding

Priority: Low | Remove or obfuscate the Server header.

8. Conclusion

The automated VAPT assessment of 'tesla.com' has been completed. The target demonstrates a Medium overall security posture. Key areas requiring immediate attention include: 0 critical vulnerabilities and 0 high-severity issues. It is recommended that the development and security teams prioritize remediation of critical and high-severity findings before re-assessment. A follow-up pentest is advised after remediation to validate that all identified vulnerabilities have been resolved. All testing was performed in a controlled, authorized manner following ethical security research practices.

This report was generated automatically by Advanced VAPT Scanner v1.0 on 2026-09-29 10:04:53. For academic and authorized security testing use only.
